Why Feet Develop Problems in Diabetes

- Nerve damage (neuropathy)
 - Loss of feeling
 - You may not notice an irritation or injury
- Poor circulation
 - Impairs the ability to heal
 - Even small cuts can get infected

Diabetes-Related Foot Problems

- Sores that don't heal
- Corns and calluses
- Dry, cracked skin leading to sores and infection
- Ingrown toenails
- Fungal infections
- Hammertoes and bunions
- Charcot foot

Keeping Small Problems from Getting Worse

- Dos – to keep you proactive
- Don'ts – to avoid bad consequences

Do . . .

- Wear the right shoes and socks
- Shake out your shoes before wearing them
- Moisturize your feet – but NOT between the toes
- Get periodic foot exams

Don't . . .

- Don't ignore any abnormality or pain
- Don't perform “bathroom surgery”
- Don't use medicated pads without doctor's approval

**American College of
Foot and Ankle Surgeons®**

Proven leaders. Lifelong learners. Changing lives.

Don't . . .

- Don't walk around barefoot
- Don't wear tight shoes
- Don't go without socks
- Don't let socks bunch up

**American College of
Foot and Ankle Surgeons®**

Proven leaders. Lifelong learners. Changing lives.

Don't . . .

- Don't soak your feet in hot water
- Don't walk on hot sand
- Don't expose your feet to the cold

**American College of
Foot and Ankle Surgeons®**

Proven leaders. Lifelong learners. Changing lives.

Don't . . .

- Don't forget to check your levels
- Don't stop doing everything you can to control your diabetes
- Don't smoke

**American College of
Foot and Ankle Surgeons®**
