

All acne patients are first medically examined by Board Certified Dermatologists and providers of SCN Dermatology before initiating any treatment.

**Chang B. Son, MD**  
**Denisse Serrano, PA-C**  
**Bin Bin Fan, PA-C**

SCN Dermatology is a full-service Dermatology Center with three offices in NJ and NYC. SCN Dermatology is founded by Dr. Chang B. Son who is a Board-Certified Dermatologist with Internal Medicine training at the Brigham and Women's Hospital at the Harvard University and Dermatology training at the Yale University. Denisse Serrano, PA-C received her undergraduate degree from Rutgers University and physician assistant degree from UMDNJ. Bin Bin Fan is a graduate of Cornell University and completed his physician assistant program at the Penn State University. Both providers underwent vigorous post-graduate Dermatology training both outside and within SCN. SCN Dermatology is also uniquely multi-lingual with staff and providers fluent in English, Spanish, Chinese, Korean, and Portuguese.

# ACNE

## TRIANGULAR APPROACH

## Medical Treatment

Acne is usually a multifactorial disease and many genetic and environmental causes can affect disease onset and progression. If there are any underlying medical conditions that can affect acne (ex: hormonal irregularity) such condition should be identified and treated first.

A combination of medical treatment modalities, such as topical retinoids, oral antibiotics, and Accutane can be initiated per each patients' need. Additional medical therapies such as photodynamic therapy or high frequency wave therapy can be considered.

**We believe that every acne patient is unique and that a 'tailored' medical therapy is necessary to achieve optimal outcome.**

## Cosmetic Repair Treatment

Acne often can be a disfiguring condition that can lead to formation of permanent to semi-permanent scar formation. Often times, there are also changes in the skin texture, pore size, and vascular distribution that can occur.

*Before (left) and After (right) photos of Fraxel*

At SCN Dermatology, each patient's cosmetic concerns can be addressed by employing an array of state-of-art laser technology, such as Fractional Laser therapy, as well as non-laser based cosmetic treatment modalities, such as microneedling therapy with Plasma Rich Platelets (P.R.P.).

**Based on the activity of the condition and the patient's skin type and color, appropriate and safe treatment modality will be offered.**

## Maintenance Therapy

Acne is a chronic skin condition and the majority of patients need some form of continual maintenance therapies.

SCN Dermatology will design appropriate home therapy using home-care products developed in-house. In conjunction, we will recommend specific maintenance skin therapies, such as Aqua peel and various chemical peeling treatment to actively maintain treated skin. All therapies are performed by providers themselves or by our license aestheticians of SCN Dermatology, who are trained and supervised by physicians.

**Medispa treatments are designed to be synergistic with ongoing medical cosmetic therapies.**
