WHAT IS DPC

DPC is not insurance but rather an affordable way for a patient to cover their primary health care needs. Health insurance is still recommended to cover any catastrophic health needs that may arise. For patients who are uninsured, underinsured or have high deductibles, DPC can provide access to a primary care physician without breaking the bank. For many patients, DPC can bridge the gap between affordable medical care and not receiving medical treatment altogether or relying on emergency rooms for non-emergency care.

We work with employers to build custom primary healthcare plans that they can provide as part of their benefits package to employees. Because we serve people and not insurance companies, we do not have a standard plan or package. Instead, we will develop a plan based on your unique needs and situation.

The goal is to help you reduce costs while improving the overall health of your workforce. Reducing claims and time missed for illness will help your business become more efficient and grow.

DIRECT PRIMARY CARE PROGRAM

Include, but not limited to:

- Same day priority appointments
- Annual physical with basic labs, (CBC, CMP, Lipids) EKG & Chest X-ray (age appropriate)
- Discounted in-house labs and imaging services
- Unlimited clinical appointments and up to 12 behavioral visits throughout the year at no additional cost
- Annual Flu shot
- Medication refills and disease management
- Chronic Disease Management (diabetes, hypertension, high cholesterol)

CORPORATE & INDIVIDUAL MEMBERSHIPS

All of our partnerships are different – and your healthcare plan should reflect the needs of your business. Because our service is to our business partners and people instead of insurance companies, we do not have a standard plan or level of coverage. We can tailor it your needs.

Lagniappe means "A Little Something Extra" and that is what we are trying to give back to our patients and community. Back to a time when Patients could trust the care and service they were receiving.

The goal is to help you reduce costs while improving the overall health of your workforce. Reducing claims and time missed for illness will help your business become more efficient and grow.

ACUTE CARE /CHRONIC CARE/ PREVENTIVE CARE

Acute care can include some of these common symptoms:

Fever, sore throat, cough, sneezing, earache, diarrhea, runny nose, nausea, rash, headache, sprains, sinus infections,

Chronic care can include these common diseases:

Heart disease, Hypertension, Diabetes, Arthritis, Asthma, Obesity, Thyroid problems,

Preventive Care:

Means to take proper measures to ensure that a patient remains free of the physical and mental disorders that can be brought on by genetics, environmental factors, and your lifestyle. Our goal is to help you arm yourself with both knowledge and quality medical care, even while you're healthy, to prevent these illnesses from developing.
