

Glenn Kolansky, MD

Board-certified and fellowship-trained dermatologist Dr. Glenn Kolansky has dedicated his practice to medical excellence and healthy, beautiful skin for 25 years. This highly educated doctor is one of few in New Jersey to complete a two-year fellowship in Mohs micrographic surgery for the tissue-sparing removal of basal and squamous cell carcinomas. Accordingly, he is sought after by patients and physicians to treat skin cancers from prolonged sun exposure. He also offers natural looking cosmetic treatment using lasers and fillers, plus hair treatment options. Dr. Kolansky performs virtually all surgeries in his office under local anesthetic.

This solo practitioner takes time to know his patients as people - they will see him personally at every visit and can reach him whenever necessary. A former pharmacist, he fully understands how medications work. Apart from his extensive training and surgical skill, patients appreciate his kindness, down-to-earth demeanor and good humor."I am honored that my fellow physicians recognize the quality of my work," he says.

Dr. Kolansky lectures on skin cancer at medical conferences. As a clinical preceptor for Rowan University School of Osteopathic Medicine for Christ Hospital and associate professor at Hackensack Meridian School of Medicine at Seton Hall University, he teaches medical students and residents.

Dr. Kolansky advises, "If you can't avoid midday sun, apply sunscreen frequently, wear protective clothing, examine your skin monthly and see a qualified dermatologist annually."

HOSPITAL AFFILIATIONS: Hackensack Meridian Health Riverview Medical Center, Red Bank; RWJ University Hospital, New Brunswick. MEDICAL TRAINING: SUNY Downstate College of Medicine (MD); University of Michigan Health System (residency); University of Iowa Hospitals and Clinics (fellowship).
