

# Computerized Gait Analysis, Prescription Orthotics and Sandals

---

[www.footmaxx.com](http://www.footmaxx.com)

Why do people suffer from  
foot and foot related problems?  
It's simple.

As you walk, run and move, your entire  
body weight lands on your feet up to  
15,000 times per day.

How do you relieve foot and foot  
related problems?  
It's easy.

Wear corrective foot orthotics (inserts) in  
your shoes.

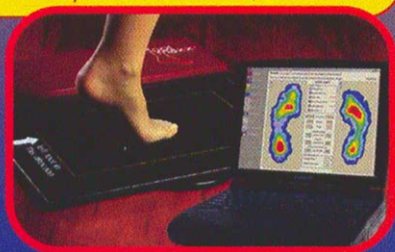

How do corrective foot orthotics work?  
It's effortless.

Corrective foot orthotics made especially  
for you, realign and support the foot so  
that it functions normally and optimally.

The Next Step in relieving foot,  
knee, hip and low back problems.

The Footmaxx System analyzes the way you walk,  
by scanning the bottom of your foot while you step  
across the pressure mat. Your doctor uses the  
information displayed on the Footmaxx proprietary  
software to assist in a diagnosis. Your doctor can  
provide you with a pre-determination of need by  
ordering a Gait and Pressure Analysis Report.  
The report presents clinical analysis, statements,  
summaries and conclusions concerning your foot  
function.

The Footmaxx proprietary software includes  
information exchange via modem allowing for  
quick turn-around time between the Footmaxx  
manufacturing lab and your doctor.

# Footmaxx Prescription Orthotic Sandals

Our Sportmaxx line of orthotics has been specifically designed with the athlete in mind. Sportmaxx orthotics are sophisticated devices created to increase performance and comfort.

No matter what the sport, Footmaxx has an athletic device that is sure to improve your game. The over 100 professional and elite amateur athletes from sports teams in the MLB, NFL, NBA, WNBA, CLF, LPGA, just to name a few, are a testament to the performance enhancing properties of Sportmaxx orthotics.

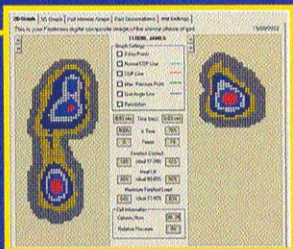

Footmaxx Orthotics

are thin and lightweight. They fit easily and discreetly into your existing footwear. You can wear your most stylish shoes, and still get the proper support and correction from Footmaxx Orthotics.

The Footmaxx Standard orthotic line is designed for patients requiring maximum biomechanical control in everyday walking and daily activities. The proprietary Duramaxx module offers long lasting memory and resiliency combined with excellent motion control. Patient compliance is one of the most difficult issues of orthotic therapy. Footmaxx helps to overcome compliance issues with our line of dress orthotics, which can be comfortably worn even in women's high heel shoes.
