DRAMA-FREE FACE-LIFT

what it is ■ Facial rejuvenation performed by a Board Certified Plastic Surgery Specialist. Local anesthesia together with one-pill sedation and no overnight stay. Recovery can be complete within 7 to 14 days.

how it improves quality of life ■ We have enough to stress about in life, elective surgery should not add to that. Patients can enjoy a short, painless recovery and quickly get back to their normal routines.

who should get it ■ Anyone wishing to leave the drama behind and achieve natural, long-lasting results utilizing the safest surgical and anesthetic approaches.

"This is not an 'infomercial face-lift.' It takes a lot of work to achieve invisibly excellent results."—*Dr. Rafael Cabrera*

Dr. Rafael Cabrera often hears a common response from his patients after they have had a face-lift with him. "I can't believe how drama-free the whole thing was."

Drama-free is how it should be; anything other than that is just not acceptable to Dr. Cabrera. Often, he will request that his patients throw away any preconceived notions they may have on elective plastic surgery. He goes on to explain to his patients that elective surgery should not be dramatic, traumatic, look weird or threaten your safety. Simply drama-free.

Plastic Surgery Specialists of Boca Raton is committed to excellence. Pure and simple, this resolution guides everything it does. Dr. Cabrera's personal surgical techniques have evolved over

the 15 years since he completed his training with the "masters" at New York University's Institute of Reconstructive Plastic Surgery. Dr. Cabrera is committed to flattering your best features and subtly reversing signs of aging. Face-lifting is an art. The art is in removing excess skin, restoring flat contours, and smoothing and rejuvenating the skin.

Fat replacement and laser light are used concurrently with minimally invasive surgery to achieve the balance of natural results and short painless recovery.

The best part of this drama-free experience is that this can be done with simple pill sedation, local anesthesia and no overnight stay. Dr. Cabrera, with more than 10,000 surgeries performed, has an unparalleled safety record.
