

## Nexclin Medicine

1250 Upper Hembree Road, Suite B

Roswell, GA 30076

770-558-2873

Love is in the air. Let's celebrate this season by giving yourself the gift of love. You can consciously make choices that improve your self-esteem and self-confidence. Be patient with yourself. Tell yourself that you are doing your best and that you are enough. Put your best effort to keep your cup full to the runneth, only then you will be able to give. As the coco channel once said, "Beauty begins the moment you decide to be yourself". Nexclin Medicine has amazing services and products that can improve your internal wellness and external beauty and empower you to become the best version of yourself.

### Nexclin Botox and Fillers

A liquid facelift involves strategically injecting botox and dermal fillers into the skin to soften the lines, provide contours and add plumpness to the face. It differs from a surgical facelift in that it doesn't involve cutting into the skin. The goal of a liquid facelift is to provide naturally lifted, fresh look. It can diminish the hollow areas under your eyes, fill your cheeks if they look gaunt, tighten wrinkles around your lips, eyes, and forehead and reduce the appearance of scars. We generally advise treatment of the entire face rather than one area for naturally youthful results. Enjoy our best prices ever during this season (while supplies last)

**Botox \$10 / unit**

**Voluma \$600 / syringe**

**Lip Filler \$399 / syringe**

**TearTrough \$565 / syringe**

### Nexclin PRP for Hair Loss

Our hair is our best accessory. In women, hair loss generally starts in the 50s. Hormonal imbalance, stress, and nutritional deficiencies are the most common causes of hair loss in women. Hair loss

harms self-esteem and body image. PRP therapy is a non surgical way to treat the hair loss and we are seeing great results. PRP therapy for hair loss is a three-step process in which a person's blood is drawn, processed to separate platelet rich plasma, and then injected into the scalp. PRP injections trigger natural hair growth and maintain it by increasing blood supply to the hair follicles. We highly recommend using laser helmets at home with the in-office PRP treatments.

**Receive 4 sessions of PRP hair loss treatment with laser helmet for \$3200**

### **Nexclin Thyroid Hormone Balance**

The most common form of thyroid disorder is Hashimoto's Hypothyroidism. This is an autoimmune disease where body is producing antibodies that are destroying the thyroid gland. Common symptoms of hypothyroidism include fatigue, weight gain, hair loss, dry skin and irregular menstruation. The treatment of Hashimoto's disease is more than just taking levothyroxine. The root cause of problem is impaired gut health that is responsible for the autoimmune reactions and inflammation in the body. Furthermore, gut bacteria helps convert T4 to the active form T3. This conversion of T4 to active T3 is also affected by adrenal fatigue. At Nexclin Medicine, management of Hashimoto's disorder involves bio identical thyroid hormone replacement, reduction of antibody load by using LDN, correction of adrenal fatigue, and optimization of the gut health.

**Receive 1 thyroid support injection per week with our shot bar yearly membership (\$60 / month)**

### **Nexclin Botox for Migraine Headaches**

Botox prevent chronic migraines and headaches before they start. Botox interrupt pain production by blocking the release of pain-producing chemicals such as substance P and calcitonin gene-related peptide (CGRP). Botox is approved for adults with chronic migraine, who experience 15 or more headache days a month, each lasting 4 or more

hours. Botox prevents on average 8 to 9 headache days and migraine/probable migraine days a month (vs 6 to 7 for placebo). In chronic migraine, standard treatments, including daily prescription preventive medications alone or in combination, are usually tried before Botox. A unique feature of Botox is that it must be administered through injection by a medical provider every three months to maintain the effect. Nonetheless, Botox has become a common treatment in headache centers in the US. Botox injections are well-tolerated, beneficial, and appear to be safe for long-term management of chronic migraine.

**Ask us about the Botox savings program that may be used towards your deductible payment.**
