

What can I expect from laser treatment?

Painless relief

Some patients report a slight sense of warmth or lightness as circulation is improved and muscles relax, others report no particular sensation during **Lumix** laser treatment.

No side effects

Lumix laser therapy facilitates the natural healing responses of the body, and does not add any biochemical, mechanical or neurological stress to the healing process. The only "side effects" of laser therapy are the natural effects of healing: the return of function and mobility in damaged joints and muscles, the return of sensation in damaged nerves, and the reduction of pain.

Quick results

Some patients experience pain relief, increased mobility, improved strength, or other symptom relief from the first treatment, while others experience relief hours or days later, or even only after the 2nd or 3rd treatment. The amount of pain or severity of injury, the amount of time since the symptom began, and the cause of symptoms all affect the speed of results. **Lumix** laser therapy tends to produce faster, and more progressive relief than many alternative therapies.

Testimonials from doctors

"I have been using **Lumix** lasers for almost 2 years, and they have significantly changed my effectiveness with my patients! I have a very heavy sports chiropractic practice with professional Olympic athletes and patients with chronic problems from heavy farm work."

Curt Draeger, DC

"The OTs are experiencing excellent results with hand patients in the control of pain. PTs are getting excellent, sometimes astonishing, results

Ward Morrow, PT

"I personally suffer quite often from bilateral elbow pain with restricted ROM. One minute laser application each with the **Lumix** 2-45 on the medial and lateral elbow and the pain is gone and with full range of motion restored."

Ray Wiegand, DC

with acute injuries of all kinds including disc herniations and whip lash. It is not surprising when a patient leaves the clinic with a pain reduction of 80% or better and sometimes even 100% when lasers are used in conjunction with other procedures."

Why did I choose Laser Therapy?

...because I wanted pain relief!

Lumix Laser therapy:
Healing at the speed of light

Lumix Laser therapy:
Healing at the speed of light

Applications

Rapid Pain Relief

The laser light of **Lumix** increases blood flow to damaged areas and accelerates the body's natural repair process.

Anti-Inflammatory Action

Lumix lasers reduce swelling caused by bruising or inflammation of joints to provide enhanced joint mobility and reduce pain.

Reduced Scar Tissue

Lumix lasers reduce the formation of scar tissue following damage from cuts, scratches, acne, or burns and post-surgery.

Improved Nerve Function

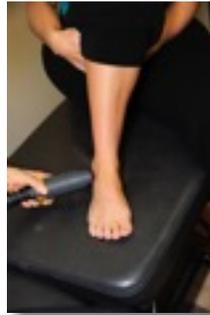

Slow recovery of nerve function in damaged tissue can result in areas of reduced sensitivity and feeling, risking further injury. **Lumix** lasers speed nerve repair to restore feeling to these numbed areas.

Faster Wound Healing

Lumix lasers accelerate the development of new cells for skin, muscles, blood vessels, bone and nerves while reducing the time to return to health and activity.

Safe and effective for many conditions

- Back Pain
- Joint Pain
- Neuropathy
- Bursitis
- Arthritis
- Sprains & Strains
- Carpal Tunnel
- Shin Splints
- Tendonitis
- Sports Injuries

Ask your doctor about Lumix laser therapy

FAQs

What is laser therapy?

Therapeutic lasers heal tissue ailments by pulsing billions of photons of invisible laser light deep into the tissues.

Human tissue naturally contains protein strands called chromophores, which have the unique ability to absorb laser light energy and transform it into chemical energy. This chemical energy is used by the body to significantly reduce pain and accelerate the healing process naturally.

Is laser therapy safe?

Clinical studies show that laser therapy achieves excellent outcomes in wound healing, reduction of inflammation and side-effect-free pain relief.

Lumix laser therapy is painless, non-ablative, non-invasive and does not cause any trauma or damage to the treated areas.

How does laser therapy work?

Lumix lasers work by supplying energy to the body in the form of photons of light and allowing the body to expedite natural healing. **Lumix** lasers load light energy into the cells and organize energetic and biochemical interactions that promote and support pain relief, cell regeneration, and collagen for injury repair.

This process also reduces inflammation, improves blood flow and accelerates healing.
