

share your health records with your care team

What is Patient Record Sharing and what does it mean for me?

With Patient Record Sharing, we can securely exchange your medical records with other participating providers regardless of where you receive care. Your record will only be exchanged with healthcare organizations where you've been treated.

Is there anything I need to do?

Nope! If you're 18 years old or older, we automatically receive and share records with other healthcare organizations where you're a patient. If you don't want to participate in Patient Record Sharing, let a member of our staff know, and we'll opt you out. Patients under the age of 18 can be opted in on an individual basis.

How does sharing records benefit me?

1. Providers at this office (and other offices you visit that are using Patient Record Sharing) can receive a more comprehensive view of your care and see what tests other providers have performed, so you won't receive duplicative care.
2. Time is valuable. Spend less of it waiting for your medical records to be sent to new providers or offices.
3. In case there is an emergency (although we hope there never is), the healthcare organization where you go for emergency care may have access to relevant health information helping them promptly provide appropriate care.
4. Reduce the hassle of filling out, faxing, and retrieving the same health history forms to your providers.
