LAMPROBE POST-TREATMENT INSTRUCTIONS

1. Do not remove, rub, squeeze or pick at the scabs because prematurely removing the scabs may cause hyperpigmentation or scarring. Pat the area dry instead of rubbing to prevent removal of the scabs.

2. When cleansing your face or showering, use mild products without alcohol. Pat the area dry instead of rubbing to prevent removal of the scab.

3. Apply Vaseline (petroleum jelly) to the treated areas for one week or until healed.

4. Avoid direct sunlight. We recommend strict sun protection for three weeks following your treatment.

5. Do not apply make-up on the area treated for 24 hours following your treatment.

6. Do not use any other form of exfoliating or bleaching products for at least three weeks.

If you should have any questions or concerns following your treatment, please do not hesitate to contact our office.
