

CLARIVEIN®

NON SURGICAL TREATMENT FOR VARICOSE & SPIDER VEINS

ClariVein®

CLARIVEIN: M.O.C.A.: MECHANOCHEMICAL ABLATION

- ✓ No Sedation Required
- ✓ Rotating 360 degrees Wire Tip
- ✓ In-Office Procedure
- ✓ Single Puncture Access Site
- ✓ Little to NO down time or pain.
- ✓ Insurance Coverage available but Limited. See your Provider

The Next Generation of Minimally Invasive Treatment for Venous Reflux Disease:

ClariVein® Occlusion Catheter

THE NON-THERMAL VEIN ABLATION SYSTEM

- Safe & effective
- Excellent clinical results
- No thermal ablation - No risk of thermal injury
- No nerve damage / paraesthesia
- No tumescent anesthesia
- Minimal discomfort and minimal bruising

How is the procedure performed?

A small catheter is inserted into the vein that is going to be treated. Only ONE access site is needed and there is no Tumescent Anesthesia Required. Over time the vein will be reabsorbed by the body's natural healing process.

Is loss of the treated vein a problem?

NO, the blood will be directed to healthy veins with functioning valves to return the blood back to the heart. This increase in circulation can significantly relieve symptoms and improve appearance.

Am I a candidate for CLARIVEIN?

Your provider will determine if you are the proper candidate for an **ClariVein**. This is determined by a diagnostic venous ultrasound that will be performed prior to your procedure to map out the veins in your legs.

- ✓ **DUPLEX VENOUS ULTRASOUND: VEIN MAPPING**
- ✓ **DECIDING FACTORS: DEPTH OF VEINS, LOCATION OF NERVES/ TORTUOSITY OF VEINS/ PRESENCE OF VALVES**

What are the potential side effects and complications associated with the procedure?

The **ClariVein** Procedure is a minimally invasive procedure and the most common side effects are **minor pain or discomfort**. You may also feel **tightness or tugging** along the treated vein, which is normal and is expected following a successful treatment. **ClariVein** carries little to no risk for nerve damage or skin damage due to the absence of thermal injury. More information in detail about complications and risks will be given to you by your physician and in your consent forms.
