

Ageless Expressions MedSpa

Male New Patient Package

The contents of this package are your first step to restore your vitality. Please take time to read this carefully and answer all the questions as completely as possible.

Thank you for your interest in Ageless Expressions MedSpa, a BioTE Medical® Provider. In order to determine if you are a candidate for bio- identical testosterone pellets, we need laboratory and your history forms. We will evaluate your information prior to your consultation to determine if BioTE Medical® can help you live a healthier life. Please complete the following tasks before your appointment:

One week or more before your scheduled consultation: Get your blood lab drawn at any Quest Laboratory/ or LabCorp Lab using the lab order form we provide. **IF YOU ARE NOT INSURED OR HAVE A HIGH DEDUCTIBLE, CALL OUR OFFICE FOR SELF -PAY LAB OPTIONS.** We request the tests listed below. It is your responsibility to find out if your insurance company will cover the cost, and which lab to go to. Please note that it can take up to one week for your lab results to be received by our office. Please fast for 12 hours prior to your blood draw.

Your blood work panel should include the following tests:

- Estradiol
- Testosterone Free & Total
- PSA Total
- TSH
- T4, Total
- T3, Free
- T.P.O. Thyroid Peroxidase
- CBC
- Complete Metabolic Panel
- Vitamin D, 25-Hydroxy
- Lipid Panel (Optional) (Must be a fasting blood draw to be accurate)

Male Post Insertion Labs Needed at 4 Weeks:

- Estradiol
- Testosterone Free & Total
- PSA Total (If PSA was borderline on first insertion)
- CBC
- Lipid Panel (Optional) (Must be a fasting blood draw to be accurate)
- TSH, T4 Total, T3 Free, TPO (Only needed if you've been prescribed thyroid medication)

Testosterone Pellet Insertion Consent Form

Bio-identical testosterone pellets are hormone, biologically identical to the testosterone that is made in your own body. Testosterone was made in your testicles prior to "andropause." Bio-identical hormones have the same effects on your body as your own testosterone did when you were younger. Bio-identical hormone pellets are plant derived and bio-identical hormone replacement using pellets has been used in Europe, the U.S. and Canada since the 1930's. Your risks are similar to those of any testosterone replacement but may be lower risk than alternative forms. During andropause, the risk of not receiving adequate hormone therapy can outweigh the risks of replacing testosterone.

Potential risks of not receiving testosterone therapy after andropause include but are not limited to: Arteriosclerosis, elevation of cholesterol, obesity, loss of strength and stamina, generalized aging, osteoporosis, mood disorders, depression, arthritis, loss of libido, erectile dysfunction, loss of skin tone, diabetes, increased overall inflammatory processes, dementia and Alzheimer's disease, and many other symptoms of aging.

Alternatives: Alternative treatment options are available to include gels and injections. We do not provide these options through our practice. You also have the option of declining our services and consulting other providers.

CONSENT FOR TREATMENT: I consent to the insertion of testosterone pellets in my hip. I have been informed that I may experience any of the complications to this procedure as described below. Surgical risks are the same as for any minor medical procedure.

Side effects may include: Bleeding, bruising, swelling, infection, pain, reaction to local anesthetic and/or preservatives, lack of effect (typically from lack of absorption), thinning hair, male pattern baldness, increased growth of prostate and prostate tumors, extrusion of pellets, hyper sexuality (overactive libido), ten to fifteen percent shrinkage in testicle size and significant reduction in sperm production.

There is some risk, even with natural testosterone therapy, of enhancing an existing current prostate cancer to grow more rapidly. For this reason, a prostate specific antigen blood test is to be done before starting testosterone pellet therapy and will be conducted each year thereafter. If there is any question about possible prostate cancer, a follow-up with an ultrasound of the prostate gland may be required as well as a referral to a qualified specialist. While urinary symptoms typically improve with testosterone, rarely they may worsen, or worsen before improving. Testosterone therapy may increase one's hemoglobin and hematocrit, or thicken one's blood. This problem can be diagnosed with a blood test. Thus, a complete blood count (Hemoglobin and Hematocrit.) should be done at least annually. This condition can be reversed simply by donating blood periodically.

RESEARCH INDICATEDS THE BENEFITS OF TESTOSTERONE PELLETS MAY INCLUDE: Individuals respond to care differently, what we typically see is improvement of your overall wellbeing and a decrease in your symptoms. Most patients have reported the following: Increased libido, energy, and sense of well-being; increased muscle mass and strength and stamina; decreased frequency and severity of migraine headaches; decrease in mood swings, anxiety and irritability (secondary to hormonal decline); decreased weight (increase in lean body mass); Studies indicate a decrease in risk or severity of diabetes; decreased risk of Alzheimer's and dementia; and decreased risk of heart disease in men less than 75 years old with no pre-existing history of heart disease.

On January 31, 2014, the FDA issued a Drug Safety Communication indicating that the FDA is investigating risk of heart attack and death in some men taking FDA approved testosterone products. The risks were found in men over the age of 65 years old with pre-existing heart disease and men over the age of 75 years old with or without pre-existing heart disease. These studies were performed with testosterone patches, testosterone creams and synthetic testosterone injections and did not include subcutaneous hormone pellet therapy.

I agree to immediately report to my practitioner's office any adverse reactions or problems that may be related to my therapy. Potential complications have been explained to me and I agree that I have received information regarding those risks, potential complications and benefits, and the nature of bio-identical and other treatments and have had all my questions answered. I agree that I may be seen by a physician, RN, or NP who will act within the legal guidelines of their practice. I understand that only an appropriately licensed prescribing provider may order medications and has authority to modify the dose or frequency of the medications ordered. I may request to consult with the physician at any time. Furthermore, I have not been promised or guaranteed any specific benefits from the administration of bio-identical therapy. I certify this form has been fully explained to me, and I have read it or have had it read to me and I understand its contents. I accept these risks and benefits and I consent to the insertion of hormone pellets under my skin. This consent is ongoing for this and all future insertions.

I understand that payment is due in full at the time of service. I also understand that it is my responsibility to submit a claim to my insurance company for possible reimbursement. I have been advised that most insurance companies do not consider pellet therapy to be a covered benefit and my insurance company may not reimburse me, depending on my coverage. I acknowledge that my provider has no contracts with any insurance company and is not contractually obligated to pre-certify treatment with my insurance company or answer letters of appeal.
