

Bioprotect (Antimicrobial) Cleaning System to fight COVID-19

For the safety of our patients and staff, Everest InvisaShield has disinfected our office, LILETTE DAUMAS MD PA, with **BIOPROTECT**, made by ViaClean Technologies. BIOPROTECT is an innovative, breakthrough cleaning technology that is EPA registered and FDA accepted. It provides disinfection and long-term antimicrobial surface protection that kills and inhibits the growth of bacteria, viruses, and other microorganisms - **including COVID-19**. All surfaces and all equipment and furniture are disinfected with this technology.

When common surfaces (touch-points) are cleaned with standard disinfectants, they leave behind no effective residual protection. Within hours of disinfection, bacteria will grow exponentially presenting risk to re-infect patients and staff. By supplementing current cleaning protocols with BIOPROTECT, a proven antimicrobial solution treatment, a continuous clean does not allow microbes to adapt or build resistance.

Causative Agent Control:		
Viruses	Bacteria	Mold/Fungi
Corona	E. coli	Ringworm
Influenza	Salmonella	Athlete's foot
HIV	Listeria	Candida
Measles, Mumps	MRSA	Asthma
Chicken Pox	Staph aureus	Aspergillosis
Hepatitis A-B-C	Tuberculosis	
Rotavirus	C-diff	
Norovirus	Legionella	

BIOPROTECT is a patented, revolutionary antimicrobial that creates a microscopic shield on porous and non-porous surfaces to destroy bacteria on contact for up to 90 days after cleaning.

BIOPROTECT is water-based, non-toxic to humans and animals, contains no harmful chemicals or heavy metals, and is bound to the surface (substrate) meaning it cannot leach into the surrounding environment.

BIOPROTECT carries an FDA master allowance file (MAF) through the Center for Devices & Radiological Health (CDRH) as well as 2 patents for the attachment of the UV (Generation II) molecule during the manufacturing process, extremely beneficial in the medical device industry.
