

Beauty and Appearance

Pre/Post Surgery

The health of your skin is crucial in the weeks before and immediately following surgery. Carefully planned out pre and post-op skin care yields the most positive surgical results. Accelerated healing, less visible scarring and less irritation lead to an increase in overall patient satisfaction with surgical procedures.

NeoGenesis Pre and Post Surgery

One month before surgery is the best time to begin using products designed to get the skin in a healthy, optimal state. This time is used to infuse the skin with nutrients and hydration that helps the skin heal faster with less swelling and bruising at the surgery site.

After surgery skin care focuses on soothing and healing the skin at the site of surgery. There may be pain, redness, swelling and inflammation at the site of the surgery. Without proper post-surgery care, there is an increased risk of scarring and infection.

NeoGenesis products calm the skin and accelerate the healing process.

Pre-surgery Protocol; twice daily

- 1) Gently cleanse the skin with the NeoGenesis Cleanser
- 2) Apply NeoGenesis Recovery serum to the site of the upcoming surgery
- 3) Apply Intensive Moisturizer or Barrier Renewal Cream
- 4) When applicable, protect the skin with chemical free sunscreen

Post-surgery Protocol; twice daily until healing is complete

- 1) Gently cleanse the skin with the NeoGenesis Cleanser
- 2) Apply NeoGenesis Recovery serum to the site of the surgery
- 3) Apply NeoGenesis Skin Serum over Recovery for additional benefits
- 4) Follow with Barrier Renewal Cream
- 5) When applicable, protect the skin with chemical free sunscreen
