

CONDITIONS WE TREAT

- ADD/ADHD
- ALZHEIMER'S DISEASE
- ANXIETY
- CHRONIC PAIN
- COGNITIVE IMPAIRMENTS
- DEMENTIA
- DEPRESSION
- EPILEPSY
- FOCUS ISSUES
- HEADACHES/MIGRAINES
- INSOMNIA
- MEMORY ISSUES
- MOVEMENT DISORDERS
- PARKINSON'S DISEASE
- PTSD
- SEIZURES
- TRAUMATIC BRAIN INJURY

BRAIN AND GAIT REHABILITATION PROGRAM

www.rmg.life

OUR SERVICES

NEUROFEEDBACK THERAPY

This works to change abnormal electrical activity in the brain. Through brain mapping and analysis, we are able to detect these deviances and work to bring the brain back to a normal state of functioning.

PHYSICAL REHABILITATION

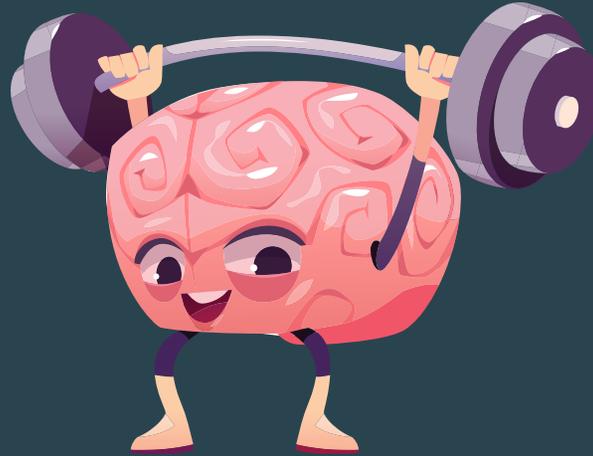

An on-site athletic trainer will assess your physical condition in order to create a personalized plan of care specifically for your needs. This twice a week, six week exercise program aims to improve balance, instability, and motor function, as well as reduce the risk of falls and bone fractures.

IV AND PEPTIDE THERAPY

Many intravenous (IV) therapies and peptides are available to help support the body's natural functioning. These peptides can be administered to support brain health, proper muscle functioning, and even help reduce pain and inflammation in joints.

WHY RMG?

Regenerative Medical Group uses a unique combination of these therapies for a given medical condition. We believe in combining regenerative medicine with family medicine, and treating the whole person. A team of physicians, kinesiologists, nurses, and technicians all work together to provide the best standards of care.

REMOTE TRAINING

RMG uses an approach of combining in-clinic therapies as well as at-home therapies. This unique combination is designed to always keep your brain and your body working. We utilize Muse headbands to track your live brain waves at home or work. Using this for 15 minutes a day can greatly increase your focus, cognitive flexibility, and can help improve your performance in the program.

THE PROCESS

INITIAL EVALUATION

1. Neuro psychological testing
2. Brain Mapping (qEEG) to assess electrical activity
3. Gait Assessment
4. Comprehensive review of brain map and assessments with physician and care team
5. Customized treatment plan for each individual based on data and symptoms

THERAPUTIC PROCESS

You will come to a clinic twice a week to work with your care team to receive neuro feedback therapy, physical rehabilitation, and optional IV's and peptides. We also offer virtual reality (VR) therapy for specific conditions. Additionally, a therapy known as "neuro priming" will be done before each physical rehab session, which is a painless procedure that targets the motor cortex of the brain and helps build better muscle memory.
