

Cliovana™ improves sexual satisfaction in women

Fewer than 20% of women can orgasm without adequate clitoral stimulation

- **What's an orgasm?** ... When arousal begins, the clitoris engorges with blood and enlarges, just like a penis does. With continued stimulation, the response of the nerve endings leads to muscle contractions that relieve the tension of the sensation build-up
- **How does Cliovana help?** ... Cliovana uses gentle, non-invasive soundwaves to stimulate the growth of new blood vessels and nerve endings in the clitoris, resulting in increased clitoral sensitivity and responsiveness
- **Cliovana creates:**
 - Increased arousal and lubrication
 - Increased orgasm intensity and frequency
 - Greater sexual satisfaction in general
- **Cliovana is a 100% non-invasive treatment;** it takes only 15 minutes per treatment with a total of 4 treatments over 2 weeks
- **It's time to focus on women's sexual wellness!**

Cliovana targets the whole clitoral structure – which is larger than you may think
