

# Sexual satisfaction is a key part of a woman's physical and emotional well-being

## It's research validated -

- Studies from around the world show a healthy and happy sex life means more than just post-orgasmic endorphins
- A satisfying sex life impacts everything from longevity and heart disease to mental health and relationships
- Enhance your sexual satisfaction, and you enhance everything else

**Better Sex. Better Life.**

# Yet many women experience less sexual satisfaction than they would like

The "**Pleasure Gap**" is the well-documented gap between how much pleasure men and women experience during sex

Only **33%** of women reach an orgasm every time – vs. **75%** of men

- **30%** of women have trouble climaxing at all
- Only **20%** of women can orgasm from penetration alone
- Yet, women have 8000 nerve endings in the clitoris – 2x the number in the penis

# As women age, various factors can lead to a cyclical decline in sexual satisfaction and arousal

- A variety of mental and physical factors have a negative impact on female sexual satisfaction:
  - Hormones
  - Menopause-related problems, including vaginal dryness and pain with sex further
  - Job stress
  - Relationship issues
- These factors can lead to the **Arousal Deficit Cycle** – where declining arousal and satisfaction lead to further decreases in arousal and satisfaction

# Clovana™

Clovana is a soundwave treatment that increases clitoral responsiveness...

Leading to:

- Increased orgasm intensity & frequency
- Increased arousal and lubrication
- Greater sexual satisfaction
