

# HEALTH TIP

## MEN'S UROLOGICAL HEALTH (IT'S NOT JUST ABOUT THE PROSTATE)

Gentlemen, when it comes to your urological health, here are three issues beyond the prostate that warrant immediate attention by a health care provider:

### Erectile Dysfunction (ED)

Difficulty with getting or keeping an erection can be a common problem as men age. But ED can also be a sign of an underlying condition that requires further investigation.

### Urinary Tract Infection

Though this is a urological problem that can occur more frequently in women, men do get UTIs. If you experience pain or burning when you pee, or notice cloudy or foul-smelling urine, see a doctor ASAP.

### Kidney Stones

2 times more common in men than women, kidney stones occur when a build up of minerals and other chemicals occur in the kidney or along the urinary tract. Kidney stones can be extremely painful, can result in urinary problems, fever, nausea/vomiting and should be checked out by a doctor immediately.
