

GOLD GLOW FACIAL | 1200

24k gold needles are used to create microchannels in the skin and platelet-rich plasma (PRP) along with hyaluronic acid are infused into the skin. The micropunctures trigger your body's natural healing response by stimulating collagen production.

Common treatment reason:

- Improve the skin texture & tone
- Glow for an upcoming event

CUSTOMIZED SKIN PEELS | 350-450

Common Treatment Reason:

- Hyperpigmentation (melasma)
- Sun Spots
- Dull Skin

PLASMA RICH PLATLETS | 800-1800

For PRP treatments, a small amount of blood is drawn and processed through a centrifuge. During the processing step, the blood cells are removed leaving the platelets and growth factors behind in the concentrated plasma. The resulting substance is called platelet rich plasma (PRP), and has been demonstrated to enhance tissue repair and cell growth.

Menu of Services

BOTOX | 450-940

A protein that is strategically injected into the facial muscles to soften facial lines that result from repeated muscle contractions. Botox can also be used to decrease sweat production.

Common treatment areas:

- Forehead Lines
- Crows feet
- Neck Bands
- Chin dimpling (peau d'orange)
- Facial/Underarm sweating
- Migraines

FILLERS | 840-3200

Non-surgical injection of hyaluronic acid to restore facial volume loss that occurs with aging, soften fine lines and lifting attention toward the eyes and away from the lower face. Dr. Kashyap provides a customized filler treatment to lift and revolumize tissues as well as to create contouring/angles.

Common treatment areas:

- Upper Eyelid Hollowness
- Temple
- Perioral + Crows
- Tear Trough
- Cheeks + NLF
- Jawline + Chin
- Cheeks + NLF + Temples + Jawline
- Fine Lines and scars

Types of filler:

- Hyaluronic Acid: Juvaderm, Restalyne .
- Calcium Hydroxyapatite: Radiesse can be used to create strong jaw angles and is a stimulant of collagen under the skin surface
- PLLA: Sculptra: filler that stimulates production of collagen and integrates with the soft tissues of the face

COSMETIC SERVICES

UPPPER EYELID BLEPHAROPLASTY | 4600-6800

Surgical procedure that treats age-related changes to the skin, muscle and fat pockets of eyelids. Repositioning the eyelid tissues back to its original anatomic position layer by layer. Often combined with Brow lifting, fat grafting and/or CO2 laser resurfacing

LOWER EYELID BLEPHAROPLASTY | 6400-8400

Surgical procedure that treats age-related changes to the skin, muscle and fat pockets of eyelids. Repositioning the eyelid tissues back to its original anatomic position layer by layer. Often combined with Brow lifting, fat grafting and/or CO2 laser resurfacing

CO2 LASER TREATMENT | 1800-2500

CO2 laser resurfacing reduces facial wrinkles and improves skin tone and texture. During the treatment, Dr. Kashyap applies a focused beam of laser energy to your skin. This creates channels into the outer skin layer, stimulating collagen production and giving the new skin a smoother, tighter, and evenly toned appearance.

Common treatment Reasons:

- Augment surgical blepharoplasty results
- Crows Feet and Eyelid Rhytids
- Scar Revision
- Xanthelasma Removal

PTOSIS REPAIR | 4000-6800

Surgical procedure that corrects drooping of the upper eyelid.

The repair is performed one of two ways to tighten the muscle that elevates the eyelid:

Internal Repair: Inverting eyelid tightening the mullers muscle avoiding skin incisions

External Repair: Incision through eyelid skin and repositioning the levator muscle.

FAT GRAFTING | 8000-12000

Surgical procedure that takes fat from the belly or thigh, emulsifies it and strategically placed in the face to restore lost volume. This fat acts as a dermal filler, lasting 5-10 years.

BROW LIFT | 4000-8000

Surgical procedure that tightens the skin and muscles above the brows, restoring your brows to their youthful position. Also, it reduces the appearance of upper eyelid hooding.

EYELID LESION REMOVAL | 680

Surgical procedure that delicately excises lesions on the eyelid and eyelid margin respecting the anatomy of the eyelid to minimize scarring and disruption to eyelid architecture while preserving eyelid function.
