

Ageless Expressions MedSpa

## O-Shot Post Treatment Form

It is important to follow your treatment provider's instructions before and after treatment.

You may take a pain medication such as Tylenol. Do not take aspirin, Advil, Motrin, Aleve, NSAID's or corticosteroids for 8 days post procedure. These drugs may inhibit the natural inflammatory response. A topical anesthetic numbing cream has been applied to the treated area. May apply ice as needed for bruising, swelling, or discomfort.

If you have any questions about these instructions or the procedure, please contact our office. (720)532-1856
