

FORT WAYNE INTEGRATIVE MEDICINE

I.V. Infusion and Injection Menu

FAQs

What should I expect during an I.V. nutrition therapy session?

During your session, a technician inserts an I.V. needle and attaches a bag of fluid, filled with the nutrients prescribed for your condition. You simply relax as the nutrients infuse into your body. You're welcome to read, nap, watch Netflix, or play on your phone using guest WiFi while you receive the drip. I.V. therapy, which typically takes approximately 30 minutes to an hour.

Who administers the treatment?

Our highly trained staff and physicians ensure all treatments and procedures are done under medical supervision using sterile, surgical grade supplies. Fort Wayne Integrative Medicine is one of the few I.V. therapy clinics in Fort Wayne that is also a full-time medical practice with a licensed on-site Board-Certified Physician, Nurse Practitioners, trained Medical Assistants and a Certified I.V. Technician.

Does it hurt?

We understand some people get nervous around needles. Please rest assured that our staff are experienced professionals who will make I.V. insertion as quick, easy and as painless as possible. Most people report feeling nothing more than a slight pinch, lasting less than 1 second.

What is the price?

Pricing of the I.V. therapies is subject to change due to availability of the compounded ingredients, short shelf life and the ingredients.

Does Insurance cover an I.V.?

Fort Wayne Integrative Medicine does not bill insurance or provide billing information to be submitted to insurance for any intravenous therapies.

Can I get the same effects from an oral supplement?

Unfortunately, no. I.V. therapies bypass the digestive system and go directly into the bloodstream, giving the patient optimal benefits.

Who is a candidate for I.V. nutrition?

Now more than ever, people are feeling overworked and fatigued. Some feel extra pressure at work, while others struggle with a lack of sleep. I.V. therapy gives the body a boost of nutrients to help restore balance.

Poor diet: Many people rely on intravenous fluids to meet their nutritional needs if they have a poor diet or have trouble with oral supplements.

Dehydration: Patients feel dehydrated after intense exercise or a night of excessive drinking. I.V. nutrition can enhance performance and prevent exhaustion.

Sickness: People getting over the flu, or a cold, can expedite healing with I.V. therapy. Possibly prevent future illnesses from developing.

Health and wellness: To maintain optimal health and wellness by providing key vitamins and nutrients.
