

Shaun E. Chandran, MD

Chandran Orthopaedics

Chandran Orthopaedics is a family-run orthopedic practice. **Dr. Shaun E. Chandran** is a board-certified orthopedic surgeon with 10 years of experience practicing in the South Bay. Dr. Chandran is currently the Clinical Assistant Professor of Orthopedic Surgery at UCLA. He completed his orthopedic residency at Stanford University and Fellowship in Joint Replacement at Massachusetts General Hospital.

Dr. Chandran's practice is focused on the treatment of arthritic conditions. Arthritis affects 10 to 13 percent of the population over 60 years old and is the most common reason for joint pain. Chandran Orthopaedics focuses on restoring patient motion through hip and knee replacement.

There are several compulsory components for having a perfect knee or hip replacement: component position, pain management, and physical therapy. Component position is integral to having a natural-feeling knee or hip joint. With the use of a robot, Dr Chandran puts the implants in perfect position every single time so that your joint replacement feels natural.

Dr. Chandran employs the latest techniques in anesthetizing the hip and knee joint and in reducing blood loss which help decrease post-operative swelling. He uses a multimodal technique with different types of pain medications and regional blocks that keep you alert and ready to move right after surgery.

Orthopedic surgery runs in the Chandran family. Dr. Chandran practices orthopedic surgery with his father, Dr. Rama E. Chandran. His sister, Dr. Sheena C Ranade, is an Assistant Professor of Orthopedic Surgery at Mount Sinai in New York. He is pictured here with his father and his children who have a potential future in orthopedic surgery as well!
