TOPICAL PROGESTERONE THERAPY

Much has been written about the non-surgical therapies for facial wrinkles. The current craze with topical hyaluronic acid and Vitamin C therapy is expensive and less effective than topical progesterone therapy. We have noticed over the years the improved collagen and elastin deposition and skin hydration with those using natural progesterone. Now this benefit can be augmented by using progesterone topically in effective clinical dosing.

The program initiates with a 2 month trial using .5 CC of cream to the local desired areas of skin wrinkles each morning for 2 month. Special attention should be given to crow's feet, forehead wrinkles, brow furrowing and perioral creases.

Those on Botox or Filler's should continue on those therapies. We would like to reevaluate you in 2 months with a serum progesterone level and compare before and after photo's. Once improvement is noted, patients will decide to continue. We have had no side effects with our progesterone therapies, which we have been treating patients with for 21 years.
