

STOP BANG

Screening for Obstructive Sleep Apnea

APPLE VALLEY
MEDICAL CLINIC, LTD
SLEEP CENTER

Poor sleep quality can be very frustrating, but it also can be dangerous. Obstructive sleep apnea occurs when muscles in the throat relax during sleep, narrowing the airway and impairing breathing. Essentially, people with this condition stop breathing for short periods of time through the night. This can lead to more serious health problems, including migraines, heart failure, depression and stroke. It is important for you to know if your sleep issues are affecting your life and overall health.

Answer the following questions to find out if you are at risk for Obstructive Sleep Apnea.

STOP

- S (snore)** Have you been told that you snore?
- T (tired)** Are you often tired during the day?
- O (obstruction)** Do you know if you stop breathing or has anyone witnessed you stop breathing while you are asleep?
- P (pressure)** Do you have high blood pressure or are you on medication to control high blood pressure?

If you answered YES to two or more of these questions, you are at risk for obstructive sleep apnea. We recommend that you contact your primary care provider to discuss a possible sleep disorder.

To find out if you are at moderate to severe risk of Obstructive Sleep Apnea, complete the BANG questions below.

BANG

- B (BMI)** Is your BMI more than 30? Use the table below to calculate your BMI.
- A (age)** Are you 50 years old or older?
- N (neck)** Are you a male with a neck circumference greater than 17 inches or a female with a neck circumference greater than 16 inches (XL shirt size)?
- G (gender)** Are you a male?

The more questions you answer YES to on the BANG portion, the greater your risk of having moderate to severe obstructive sleep apnea.
