

Smartlipo®

Reshape Your Body. Reshape Your Life

Smartlipo laser body contouring is a minimally invasive, laser-assisted lipolysis procedure targeting trouble spots that won't respond to diet and exercise.

HOW IT WORKS

1. Smartlipo uses local anesthesia to numb only a specific area of the body being treated so you're awake during the procedure.

2. The Smartlipo laser fiber is inserted through a very small tube into your body, the laser ruptures the fat cell membranes and the fat cells are permanently destroyed.

3. The liquefied fat is gently suctioned out. Because Smartlipo actually tightens the skin through coagulation, you don't have to worry about dimpling and sagging skin.

4. Typically, only one treatment is required, results can usually be seen within a week, with continued improvements over 3-6 months.
