The Erchonia Lunula Laser uses low level laser light to target toenail fungus. Lunula is FDA market cleared to effectively target the appearance of this unsightly and sometimes painfully troublesome condition. In as little as 4 weekly 12-minute treatments, you can regain your flip-flop and barefoot freedom. Unlike other hot lasers (ouch) that claim to treat toenail fungus or onychomycosis, the Lunula is the only pain free, non-thermal laser that has no dangerous smoke plumes or vapors and requires no anesthesia. If you've tried other options for toenail fungus such as sprays, lotions, or oral prescription pills without lasting results, the Lunula will be your superior option. It will significantly increase clear nail growth over a six-month period. Clinical trial results demonstrated 89% of patients experienced 6.1mm more new clear nail growth over a 6-month period. Find out how you can get on your way to bearing all 10 digits without embarrassment!
