California Adult Tuberculosis Risk Assessment (>18 years old)

Despite being preventable, tuberculosis (TB) disease continues to cause significant suffering and death in the state of California. Even with modern treatments, more than [1 in 6 Californians with TB die](https://www.cdc.gov/tb/data/tbca_data.htm) (bit.ly/cdc_tbca_data). TB is also a health disparity in California, with a disproportionate impact on people born outside the United States. **Identifying and treating persons with latent TB infection (LTBI) is the most promising tool to prevent TB disease.**

- Use this tool to identify asymptomatic adults for LTBI testing.
- Do not treat for LTBI until active TB disease has been excluded.
- A negative tuberculin skin test or interferon gamma release assay does not rule out active TB disease.

If a patient has symptoms of TB disease, including cough (for more than 2 weeks), fevers, night sweats, unexplained weight loss, or an abnormal chest x-ray consistent with TB disease, they should undergo further workup. **Contact your [local TB control program](https://www.ctca.org/locations.html)** if there is suspicion for active TB disease.

LTBI testing is recommended if any of the boxes below are checked.

Only repeat TB testing if there is a new risk factor since last screening

☐ **Birth, travel, or residence** for at least 1 month, or frequent border crossing in a country with an elevated TB rate*

Interferon Gamma Release Assay (IGRA) is preferred over Tuberculin Skin Test (TST), especially for non-U.S.-born persons

☐ **Immunosuppression**, current or planned

HIV infection, organ transplant recipient, treated with biologic agents including TNF-alpha antagonist (e.g., infliximab, adalimumab, etanercept, others), steroids (equivalent of prednisone ≥ 15 mg/day for ≥ 1 month) or other immunosuppressive medication

☐ **Close contact** to someone with infectious TB disease during lifetime

☐ **Homelessness or incarceration**, current or past

Persons experiencing homelessness or residing in high-risk congregate settings including homeless shelter or correctional facility during lifetime

Treat for LTBI if LTBI test result is positive and active TB disease is excluded.

☐ **None**; no TB testing is indicated at this time.
