

Secretropin - SRx

CLINICAL APPLICATIONS

- Increases growth hormone production
- Decreases body fat
- Increases muscle strength
- Improves bone density
- Enhances mood and energy level
- Immune support
- Improves skin tone and texture

DISCUSSION

Secretropin(SRx) is a non-peptide, secretagogue that has clinically been found to increase the production and release of GH (as measured by IGF-1 and IGFBP-3) through a number of pathways; suppression of Somatostatin, stimulation of GHRH, Dopanergic, Gherlin, and a Non-specific Synthetic Receptors. Additionally, Secretropin is believed to directly stimulate pituitary Somatotrophs thereby increasing the production and release of GH. Secretropin is classified as a natural food supplement and not a drug. Nor does it contain any drugs.

Historically, in October 2006, a study group of 50 individuals was organized for a prospective, 12-month study on Secretropin's influence on IGF-1 and IGFBP-3 levels. Again, in January 2008, another group of 50 patients were studied in our on-going commitment to document the short and long-term benefits of Secretropin. In the past three years the number of study participants has grown to more than 60,000 patient months of data showing an average increase in IGF-1 by 50-300% in more than 90% of participants.

DOSING

BEDTIME ONLY: Place 4 sprays under the tongue and hold for 30 seconds before swallowing. Perform this process 30 minutes before a meal and then wait 30 minutes before eating or drinking. If you eat, then wait 30 minutes before using.

SUPPLEMENT FACTS

Active Ingredients: Pyroglutamine, L-Glutamine, L-Arginine, L-Lysine, L-Valine, L-Tyrosine Alpha-ketoglutarate, L-Ornithine, L-alphaglycerolphosphoryl-choline, Gamma Amino Butyric Acid(GABA), and Mucina pruriens.

Other Ingredients: Deionized water, Lecithin, Phospholipids, Sodium citrate, Citric acid, Maltodextrin, Potassium sorbate, Artificial color and Flavour.

Each two(2) sprays delivers 300mg of the proprietary blend of the active ingredients.
