

What is URINARY INCONTINENCE?

Incontinence is the loss of bladder control and is a symptom of an underlying condition or disorder.

- ◆ More than 15 million Americans suffer from urinary incontinence.

- ◆ One in five adults over the age of 40 suffers from overactive bladder, including symptoms of urgency and frequency.

- ◆ Approximately 80% of those suffering with incontinence can be treated or cured.

What is Stress Urinary Incontinence?

- ◆ The involuntary loss of urine that occurs when the bladder experiences pressure during physical activity, including high impact exercise or low impact sneezing and laughing.

What is Urge Incontinence?

- ◆ The uncontrollable, frequent urge to urinate. These urges come with no warning and lead to accidents.
- ◆ Also known as overactive bladder.
