

LASER CATARACT SURGERY

Beverly Hills/Los Angeles Cataract Surgeon Dr. Rabinowitz also serving Santa Clarita/Valencia and Lancaster for the past 25 years

What is a cataract?

A cataract is the clouding of your natural lens resulting in decreased vision and glare at night.

Manual Cataract Surgery

This cataract extraction procedure is performed by hand. Several incisions are made into the eye with a blade, the capsule of the lens is opened with a needle, the lens is extracted by ultrasound and a clear plastic lens is inserted into the bag which encapsulated your natural lens, to allow you to see clearly. Click on the video below for a more detailed explanation of how manual cataract surgery is performed

Laser Cataract Surgery

The most newest and most advanced technique for removing cataracts is with a femtosecond laser. In this procedure all the incisions are made with a laser and the hard lens is softened so less energy is needed to remove it. This results in faster, safer and more accurate surgery. See video below for a demonstration of how laser cataract surgery is performed
