

BREAST THERMOLOGY: SENTINEL BREAST SCAN II (SBSII)

Breast Cancer Awareness: Are you at risk?

- 1 in 8 US women will develop Breast Cancer during lifetime, most common cancer
- 250,000 US women are diagnosed with breast cancer every year & 40,000 will die
- 85% of breast cancers occur in women with no family history of breast cancer

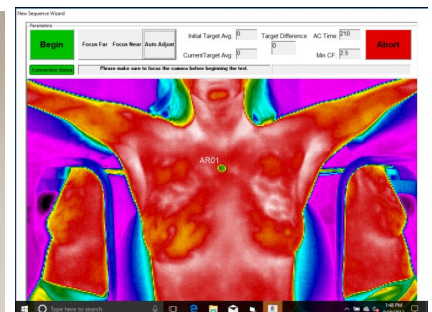

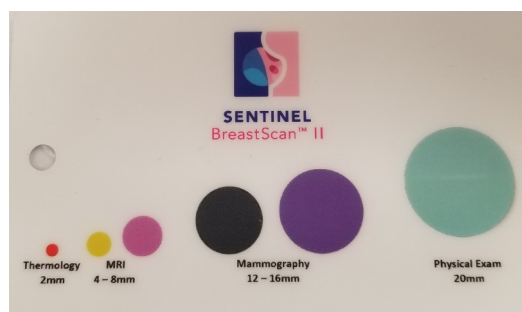

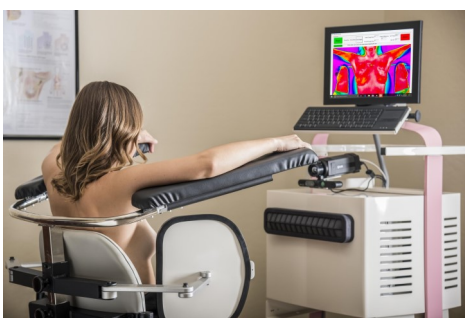

Anti-Aging & Wellness Center is now pleased to offer the most advanced FDA approved thermal imaging Sentinel BreastScan II to assess breast health & risk of developing cancer.

Breast Thermology is a radiation-free, non-invasive, painless, fully automated screening that captures infrared images of the breasts. The screening identifies abnormal heat patterns or vasculature in breast tissue that may be associated with risk of breast cancer.

Thermology can detect suspicious activity as small as 2 mm within the breast tissue up to 8 years before actual breast cancer develops. Mammography detects breast cancer after it is developed, generally 12-14 mm. Physical examination detects lesions around 20 mm.

Thermology is ideal to monitor breast health annually starting in 20's:

- Appropriate for all age women even those with dense breasts, cystic or nodular breasts
- Appropriate for all women on birth control, HRT or bioidentical hormones (BHRT)
- Appropriate for all women at risk of breast cancer with or without family history of cancer
- Appropriate before all other imaging eg. Mammogram, Ultrasound, MRI
- Appropriate for women who have had biopsy, surgery, cancer, lifts, reductions, implants

INTRODUCTORY PRICE \$125 ONLY
