## **Healthy Minds: Nurturing Your Child's Development from 9 to 12 Months**

What do we really know about how a young child develops? What can parents do to best support their child's healthy development and growing brain? Some of the answers are in this series of *Healthy Minds* handouts. Each handout is based on findings from a report\* from the National Academy of Sciences that examined the research on child and brain development to establish what is known about the early years. The information we offer is age-specific, summarizes key findings from the report and suggests how you might be able to use these key findings to nurture your own child's healthy development.

### **Key Findings from the Report Include:**

- Your relationship with your child is the foundation of his or her health development
- Your child's development depends on both the traits he or she was born with (nature), and what he or she experiences (nurture).
- All areas of development (social/emotional/intellectual/language/motor) are linked. Each depends on, and influences, the others.
- What children experience, including how their parents respond to them, shapes their development as they adapt to the world.

### **How it looks in everyday family life:**

Eleven-month-old Tyra is with her dad, Kevin, at the park. Tyra is playing alone in the sandbox when a group of toddlers joins her. At first, Tyra smiles and eagerly watches their play. But as the toddlers become more active and noisy, Tyra's smiles turn quickly to tears. She starts to crawl out of the sandbox and reaches for Kevin who picks her up and comforts her. But then Kevin goes a step further. After Tyra calms down, Kevin gently encourages her to play near them. He sits at her side, talking and playing with her. Soon Tyra is slowly creeping closer to the other children, curiously watching their moves.

This shows how all areas of Tyra's development are linked, and how her father's response encourages her healthy development. Tyra's looking to her dad for comfort shows that she had developed a close and trusting relationship with him. This is an important sign of her **social and emotional development**. She uses her **intellectual skills** to make a plan ("I want to be comforted by Dad, how do I do that?"), and her **language** (crying) and **motor skills** (crawling away, reaching up to Dad) to carry out the plan and successfully get the comfort she is seeking.

Kevin's sensitive response has a powerful influence on what Tyra learns from this experience. He lets Tyra know that her needs and feelings are important. This will help Tyra develop future relationships based on love and trust. He is also letting her know that she is a good communicator, which will encourage Tyra to communicate more and more and help her develop good language and literacy skills. His response also makes Tyra a good problem-solver. She wanted comfort and she found a way to get it. By sitting with her near the other children, he lets Tyra know that she has the support she needs to successfully meet new challenges. This will help her feel confident to handle other challenges as she grows.

Relationships are the foundation of a child's healthy development.

## Charting Your Child’s Healthy Development: 9 to 12 months

The following chart described many of the things your baby is learning between 9 and 12 months and what you can do to support your child in all areas of his development. As you read, remember that children develop at their own pace and in their own way. Understanding who your child is, what his strengths are and where he needs more support, is essential for promoting healthy development. If you have questions regarding your child’s development, ask your pediatrician.

<b>What’s going on:</b>	<b>What you can do:</b>	<b>Questions to ask yourself:</b>
Babies this age are very good at expressing their feeling with their gestures, sounds and facial expressions. They can engage in “conversation”, for example, handing things back and forth to you, imitating each other’s sounds and actions. They also understand “cause and effect”—that they can make something happen: “If I Cry, Mom will come.”	<ul style="list-style-type: none"> <li>• Help your baby handle her feelings. Comfort her when she cries, acknowledge when she’s frustrated and help her calm down and try again. This helps your child manage her very strong feelings and develop self-control.</li> <li>• Engage in “circles” of communication with your baby. Keep it going as long as she’s engaged. If she reaches for a book, ask, “Do you want that book?” Wait until she responds, and then hand it to her. She what she does with it and join her without taking over. These “conversations” help boost her overall development—social, emotional, language, intellectual and even motor.</li> <li>• Talk a lot with your baby. For example, label and narrate. “You’re eating a big banana!” Give her time to respond.</li> <li>• Respond to her communications. See how long you can keep a back-and-forth conversation going. For example, she makes a sound, you imitate it, she makes another sound and so on.</li> </ul>	<ul style="list-style-type: none"> <li>• How would you describe your baby’s personality? In what ways are you and your baby alike and different?</li> <li>• How does your baby let you know what she wants; what she’s thinking and feeling?</li> </ul>
Thanks to their new memory skills, babies this age know that when you leave, you still exist. This is a very important skill, but also can lead to difficulty when leaving. This is why babies often protest at bedtime and cry out for you in the middle of the night. They try to get you to come back by gesturing, crying and calling out.	<ul style="list-style-type: none"> <li>• Play hide-and-seek games like peek-a-boo. Disappearing and reappearing games like this help your baby learn to cope with separation and feel secure that you always come back.</li> <li>• Be positive when leaving her. Go to her at night to reassure her you are still there but don’t pick her up and rock her back to sleep. Falling asleep in your arms makes it more difficult for her to soothe herself back to sleep if she wakes up again at night. When saying “goodbye”, tell her you will miss her, but that you will return. Make sure she has something that gives her comfort, like her “blankie” or favorite stuffed toy</li> </ul>	<ul style="list-style-type: none"> <li>• How does your baby handle it when you leave? What helps make it easier?</li> <li>• What’s hardest for you about being away from your child? Being aware of your own feelings is very important.</li> </ul>
Babies this age do things over and over again because that’s the way they figure out how things work, and doing things repeatedly builds their self-confidence. It also strengthens the connections in their brains. Their ability to move in new ways (crawl, stand, even walk) makes it easier to explore and helps them make new discoveries, such as finding their favorite book under the chair.	<ul style="list-style-type: none"> <li>• Be your child’s learning partner and coach. Observe her closely to see what she can do. Then help her take the next step. For example, encourage her to put one more block on her tower or to try and fit the cube into a different hole.</li> <li>• Follow your child’s lead. The more she directs the play, the more invested she is and the more she will learn.</li> </ul>	<ul style="list-style-type: none"> <li>• What are your baby’s favorite activities? What does this tell you about her?</li> <li>• What does your baby do well? What does she find challenging? How can you be a partner in helping her face these challenges?</li> </ul>
<p>* The report, From Neurons to Neighborhoods: The Science of Early Childhood Development, was a 2 ½ year effort by a group of 17 leading professionals with backgrounds in neuroscience, psychology, child development, economics, education, pediatrics, psychiatry and public policy. They reviewed what was known about the nature of early child development and the influence of early experiences on children’s health and well-being. The study was sponsored by a number of federal agencies and private foundations.</p>
